

Environmentally friendly and sustainable

Hot melts for linerless labels

arti
melt

Linerless labels are an attractive solution that is welcomed by the environment and customers alike. Labels without release liner offer a multitude of advantages: more labels per reel reduce transportation and storage volume as well as machine downtime significantly. There is no release-liner waste which has to be stored, transported and recycled or disposed. Linerless labels are a cost-effective, environmentally friendly and sustainable solution.

Special properties and advantages

- artimelt adhesives have been successfully used for years in the production of linerless labels
- 100% adhesive system, synthetic rubber based, solvent-free. Available as blocks or in drums.
- Easy application on hot melt coaters
- Suitable for direct food contact with dry, moist and non-fatty foodstuff
- Excellent properties
- High initial tack on cardboard and low-energy surfaces (e.g. polyethylene)
- High final adhesion
- Suitable for manual and machine processing (labeling)
- Longer-lasting label roll
- Low dirt pick-up tendency
- Longer maintenance intervals for printing and dispenser systems

Applications of artimelt adhesives

- Coatings for the production of linerless labels
- Application areas: food, logistics and transport
